EXECUTIVE & CUSTOMER PROFILE

The Impact of Contracts and Subscription Duration on Telco Customer Churn

1 Are month-to-month contracts and initial tenure periods the primary churn drivers?

This dashboard highlights key customer attrition drivers, demographics profiles, and retention trends across different tenure cohorts.

Objective

Identify critical drop-off points during early subscription months and establish targeted retention strategies for high-risk cohorts.

Churn & Retention Trends by Customers Tenure Cohorts

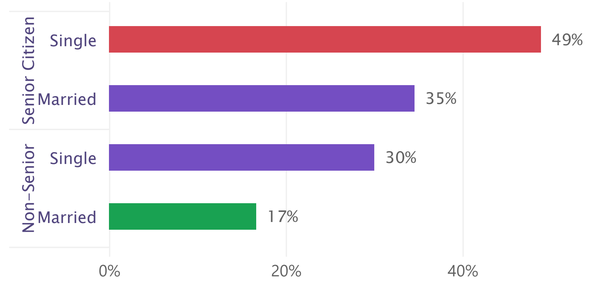

Churn rates decrease significantly as account tenure matures.

Churn Rate by Contract Type by Contract

Demographics Churn

2 KEY INSIGHTS

1. **Month-to-Month High Risk**
Month-to-Month contract exhibit a severe 42.7% churn rate, compared to just 2.8% for two year term.

2. **0-12 Month Critical Drop - off Window**
Nearly 50% of overall churned users cancel their service within the first 12 months of subscription.

3. **Severe Vulnerability in Senior Single Segments**
Demographic analysis reveals that Senior Singles experience the highest churn rate at 49%, whereas Married Non-Seniors are the most loyal segment.

3 ACTIONABLE RECOMMENDATIONS

1. **Contract Migration Incentives**
Provide a monthly discount incentive for month-to-month subscribers who transition to 1 or 2 year plans.

2. **Proactive Early Onboarding**
Deploy automated check-in work flow and introductory loyalty perks during the first 90 days to reinforce retention.

3. **Targeted Single & Senior Retention Bundles**
Create tailored multi-line family discounts and simplified tech support bundles tailored specifically for senior and single accounts.

Matrix Heatmap: Combined Risk of Service Features

TechSupport	No Security	With Security
No Tech Support	49%	21%
With Tech Support	22%	9%

Count of Customer

by Streaming Service (Movies and TV)

2 KEY INSIGHTS

1. **High-Risk Customer Concentration in Month-to-Month Contracts**
   Total of 2,220 active month-to-month customers serve as the primary baseline group most vulnerable to churning.
2. **High Billing Burden and Potential Revenue Loss**
   Churned customers exhibit higher average monthly charges at $74.44 (driving a monthly revenue-at-risk of $136.45), significantly surpassing the loyal customers average of $61.27
3. **Dominance of Risky Payment Channels and Services**
   Electronic check payment methods trigger the highest churn rate at 45% compounded by Fiber optic internet services dominating churn at 42%.
4. **Maximum Vulnerability Without Security and Support Features**
   Customers lacking both Tech Support and Online Security experience the most severe churn rate reaching up to 49%, whereas security protections prove effective in driving down churn.
5. **Widespread High Churn Risk Across Streaming Segments**
   Based on the Treemap, all streaming segments consistently exhibit high churn rates above 20%, proving that entertaining features are not primary retention drivers.

3 ACTIONABLE RECOMMENDATIONS

1. **Month-to-Month Contract Conversion Incentives**
   Provide term-discount incentives for the 2,220 Month-to-Month customers to convert to 1 or 2 year contracts to lock in long-term retention.
2. **Early Intervention on High-Bill Segment**
   Deploy proactive outreach and plan optimization for customers with high monthly charges (>74.44) before they churn and put monthly revenue at risk.
3. **Payment Channel Migration Campaign**
   Offer targeted incentives or fee waivers for customers to migrate from Electronic check payments to automated payment systems (Auto-Pay) to reduce the 45% churn rate.
4. **Shift Promotional Focus from Streaming to Security Add-ons**
   Reallocate entertainment promotion budgets and mandate Tech Support and Online Security bunding for Fiber optic users to cut down extreme 49% churn risks.
